

# HIV PREVENTION

## SERIES 2021

VIRTUAL | 18 MAY

### PROGRAM DIRECTORS

**Mauro Schechter, MD, PhD**  
Federal University of Rio de Janeiro,  
Brazil

**Susan Buchbinder, MD, PhD**  
University of California, San Francisco,  
United States

## ABOUT THE MEETING

The **HIV Prevention Review Meeting 2021** will take place in May 2021 as a virtual meeting.

The global HIV epidemic continues to present a significant health and economic burden for nearly 38 million infected people worldwide. Despite notable progress to contain the virus spread and a reduction of nearly 40% in new infections in the last two decades, 1.7 million new cases were reported worldwide last year alone. This is particularly of concern in certain regions, where the number of new infections has been growing rapidly. In Eastern Europe, for instance, it has grown almost 50% per year since 2010.

HIV prevention is in the midst of an exciting chapter, with several different drugs and formulations being investigated or already available to prevent HIV acquisition. This wealth of new data and knowledge, being present at the major conferences, comes hand-in-hand with a need to review the importance of these findings and their implications for the implementation of prevention programs. **The Prevention 2021 Review Meeting** aims at bridging this gap to consolidate the implications of the new data on PrEP presented, and thus extrapolates the impact of the latest emerging data.

Registration fee is **waived** for all healthcare professionals.

### The meeting will cover, among others:

- HIV Vaccine Landscape
- Oral PrEP Today – Where Do We Stand?
- Pharmacokinetics of LA PrEP, Treatment Failure, and Resistance
- Overview of Clinical Data
- What Is on the Horizon in the PrEP Arena?
- Roundtable Discussion: Where Is HIV Prevention Going?

**BRIDGING THE GAP BY REVIEWING THE CURRENT STATUS, EXCITING FINDINGS, AND NEW APPROACHES TO IMPROVE HIV PREVENTION.**
